

pewag winner profilift lifting points

For safe lifting and lashing

Developed & manufactured at the heart of Europe – for use throughout the world.

Experience since 1479

Content

Screw-in and weldable lifting points from pewag.

pewag winner profilift lifting points set new standards for the lifting and moving of loads.

Our innovative product range offers highest standards when it comes to quality, safety and user-friendliness. All products are compatible with the popular pewag winner lifting chain programme.

Welcome to the pewag group

We are an internationally operating group of companies. Our track record goes back to the year 1479.

Mission Statement

pewag group's Mission Statement expresses the goals of our actions as follows:

With our joy for innovation, we strive to make all products of the pewag group the best in the respective markets. The high quality of our products and services as well as our employees' passionate dedication are the foundation to our pursuit of outstanding services and complete customer satisfaction.

Principles of pewag group

Leading in Quality

The values of our product brands are demonstrated by our first-class quality and innovations and are communicated consistently and coherently.

We anticipate market demands and changes in the environment and adapt our strategies, organizations and actions accordingly to satisfy our customers' needs through providing an optimal price-performance ratio: timely delivery, efficient and obliging service.

Leading in Responsibility

We commit ourselves to careful treatment of the environment, by reducing the use of energy and raw materials, ensuring the longevity of our products and making them recyclable.

We value an open, honest and team-oriented work-style, which is based on transparent communication honoring ideas, opinions and experience of our employees as valuable inputs for our decision making process.

We strive for stable and fair partnerships with our employees, customers, suppliers and other business partners and take social aspects into consideration when making business decisions.

Leading in Technology

We secure our technological strength by striving for product quality, constant improvements and innovations of products, as well as manufacturing processes.

We strive to be the best in product technology. This ensures that our customers always have optimal solutions available and that we expand and protect our market position.

Leading in Economics

In all our processes we use due diligent business practices and efficiency and strive to improve these continuously.

In the long-term, we will continuously increase our economic performance to raise corporate value, achieve sustained growth and thus secure a successful future of the organization.

We are a modern group of companies which looks back to a tradition and experience of more than 500 years. Since our founding years, a lot has changed, but the values that made our success possible from the beginning remain.

**pewag group –
Innovation. Quality. Partnership.**

History of the pewag group

Quality management

Advantage through tradition

The history of pewag group goes back to the 15th century and therefore makes us one of the oldest chain manufacturer worldwide. With our experience we are ready for the future.

Timetable of important events

- 1479** First documented references of a forging plant in Brückl
- 1787** Foundation of a chain forge in Kapfenberg
- 1803** Foundation of a chain forge in Graz
- 1836** Establishment of an iron casting plant in Brückl
- 1912** Production of the first pewag snow chain
- 1923** Merger of plants in Graz and Kapfenberg – Creation of the name “pewag”
- 1972** Foundation of a sales company in Germany
- 1975** Foundation of a sales company in the USA
- 1993** Foundation of pewag austria GmbH
- 1994** Foundation of the first subsidiary in Czech Republic
- 1999** Acquisition of the Weissenfels Group
- 2003** Separation from the Weissenfels Group
- 2005** Reorganization into 2 groups:
Schneeketten Beteiligungs AG Group – Snow Chains
pewag austria GmbH Group – Technical Chains
- 2009** Acquisition of Chaineries Limousines S.A.S.
- 2012** Foundation of the first manufacturing company in the USA
- 2013/** Foundation of various international sales
- 2014** companies

Chain forgers 1956

Our main goal is customer satisfaction

In this instance, quality means that only those products and services are developed, manufactured and delivered which completely and without compromise satisfy the customer.

The pewag group’s quality policy, is underlined by the following basic principle: **“we supply high-end products and services to our customers that conform to the technical standards and requirements”**, can be summarised in the subsequent four points.

Market-oriented Quality

In order to maintain and to widen the competitive position of the pewag group, the quality of finished goods and services must be consistent with the specifications of the customer and also with their expectations of one of the leading companies. No product should ever pose a danger to people or the environment.

Economic Quality

As a profit-oriented company, quality is achieved by taking into consideration the material, personnel and financial resources; this means that we establish an appropriate best price/performance ratio for the customer within the acknowledged framework.

Quality Responsibility

Stringent demands are placed on all employees to ensure high standards of quality. No matter what hierarchical level, all managers are in charge of managing quality. Every employee within the pewag group should be educated, motivated and instructed by the management team. It is important for promoting high quality awareness that the education and training of employees is at the forefront, as each employee is responsible for the quality of his/her own work.

For each of our employees, the statement **“QUALITY STARTS WITH ME”** must be true!

Process-oriented Quality

The close interaction between sales, product development, production and customer service is regulated within the individual companies by fixed processes and activities, as well as responsibilities with the aim to reach and maintain the defined quality standards.

Business areas

Environment – we take responsibility

Working with pewag products

The pewag group has a substantial and diverse spectrum of products and services.

Our range of products varies from traction chains for tires (snow chains for passenger cars, trucks and special-purpose vehicles, tire protection chains for mining vehicles) over different industrial chains to products for the do-it-yourself sector (light chains, belts, etc.)

Segment A
Snow and forestry chains

Segment B
Hoist and conveyor chains

Segment C
Do-it-yourself

Segment D
Engineering

Segment F
Lifting and lashing chains

Segment G
Tire protection chains

Ecological awareness in all areas

Our company's manufacturing location in Kapfenberg, Austria, has been used for iron and steel production for over 270 years. A second facility located in Brückl, Austria, was first documented in records dating back to 1479. Based on this long manufacturing tradition, we take serious responsibility for our products, employees and the environment at all our international locations. Hence, one of our major concerns is to improve energy efficiency and, in doing so, to minimise energy consumption over a long period of time with the development of new production technologies. An important goal is to increase energy efficiency and consequently lower energy demand. Consequently, we develop our products to achieve longer product life-cycles and lower weight but simultaneously, increasing their working load capacities and the safety for our customers. We are committed to upholding all relevant energy and environmental standards by setting clearly defined goals and continually improving our performance. To achieve this goal, we use modern manufacturing technologies. An important step is to provide the necessary resources and to include our employees in the process. We are convinced that well-informed and motivated employees can actively participate in environmental conservation.

Wherever we are unable to avoid an environmental impact, we have set ourselves the goal to continually reduce our energy consumption, waste and environmentally harmful emissions. When purchasing new equipment, we strive to find the best and most efficient technical solution possible. It is important for us to promote the purchase of energy efficient products and services.

Our process-oriented management system regulates the documentation concerning all environmental relevant procedures. It also encompasses preventative measures for possible failures, as well as behavioural instructions for regular and/or extraordinary operational procedures. By systematically monitoring and assessing our environmental activities, we are quickly able to resolve deviances and to take corrective action. This process extends throughout the whole organisation to optimise all business processes. We strive to engage in an open dialogue with our customers, neighbours and authorities to inform them of our energy and environmental engagements.

Through specific communication we want to inform our customers about the environmental aspects of our products – specifically inform them about the longevity of our products. Through meaningful communication, we strive to motivate our suppliers and customers to think – in turn – about their environmental footprint and to put into practice similar environmental standards in their businesses.

Customer proximity

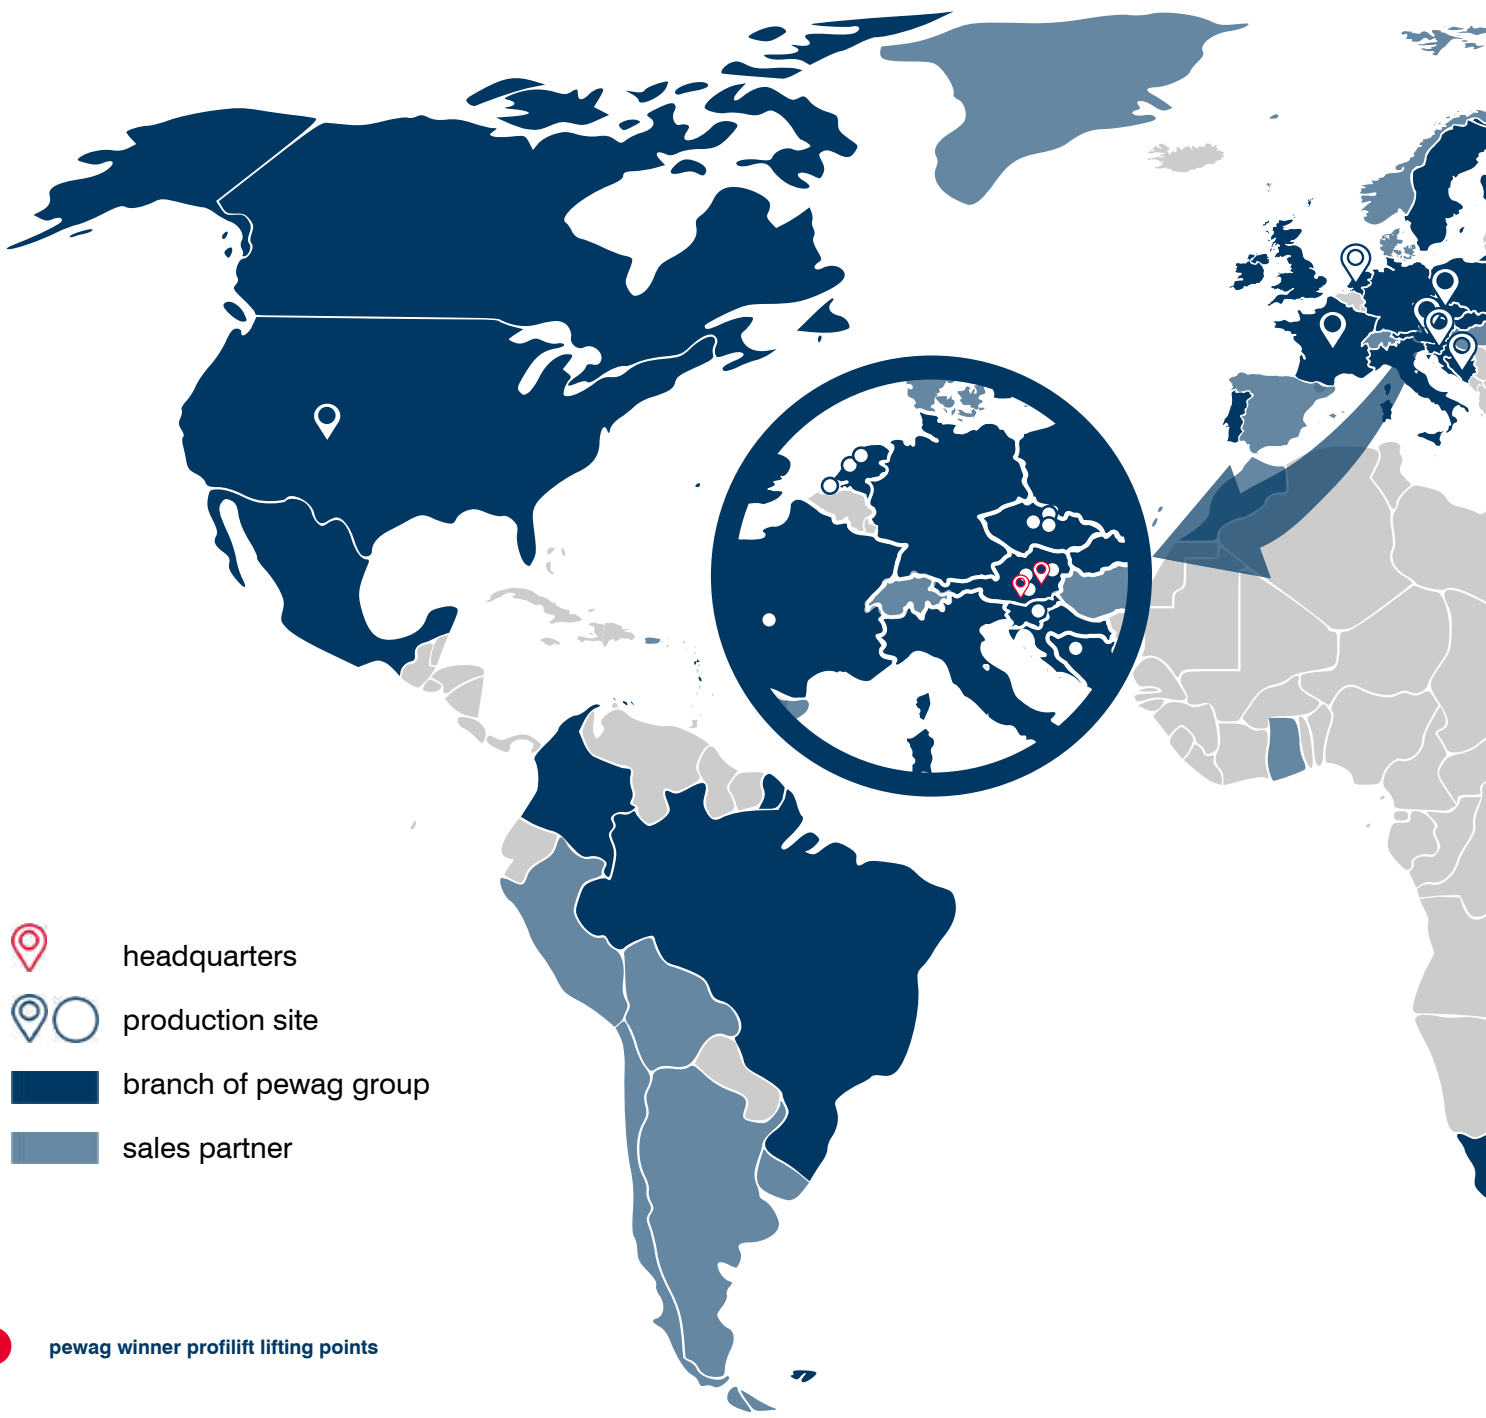

International presence

In the ambitious five-hundred year history pewag has evolved from a small and modest company to a global organization with several subgroups.

With 16 production and over 50 sales and other locations on all five continents, the pewag group documented its claim as one of the world's leading chain manufacturers. Further, pewag group is active with 45 sales partners worldwide.

In addition to the numerous locations pewag as an international company relies on it's extensive, strong, and professional partner network. These collaborations provide optimal customer service in currently more than 100 countries around the world.

pewag Creating links

The peTAG solution enables the company-wide, flexible servicing and administration of a wide range of objects.

peTAG solution

The intelligent solution for clear object identification, seamless data transfer, straightforward servicing of objects, safe archiving of data, efficient interaction with partner companies and much more.

peTAG info

Smart, free-of-charge access to product-specific information via the mobile web.

peTAG manager

PC and mobile end devices work hand in hand with this adaptable, high-performance platform that stands out in any working environment and improves data quality at the same time. Additional, expensive reading devices and manual data transfer belong to the past.

The pewag profilift lifting points PLAW, PLBW, PLGW, PLDW, PLEW and PLZW come with a pilot hole for the transponder (Ø 4 mm).

peTAG solution

peTAG solution Key facts

Intelligent software

User-specific adaptation of object data, inspection processes and steps. Automated compilation, dispatch and archiving of inspection reports. Sophisticated authorisation concept.

Save time & money

Efficient documentation of working processes, thereby making daily workflows easier. Seamless data exchange, error-free data communication.

Mobile solution

Direct, location-independent data retrieval (e. g. working load limit, safety information, latest inspection report etc.). Smart servicing of objects via the mobile app. Offline availability.

Linked partnerships

Easy exchange and efficient interaction between service providers, dealers and customers. Improved service and data quality. Increased satisfaction and loyalty.

Always up to date

Access to the latest product data and information. Overview of all inspection data. Documented inspection. Full traceability of the object history.

Screw-in and weldable hooks and lifting points, anchorage points.

Variety has a name: pewag! The profilift product portfolio consists of high-quality products that are perfectly suitable for almost any lifting application

pewag – innovation that is safe as houses

Lifting and lashing: the highest level of safety for operating staff and goods to be transported.

As a European premium chain manufacturer, pewag has always been synonymous with innovation, quality and safety, presenting innovations and defining new standards on a continuous basis.

The pewag winner profilift range of lifting points stands out for its excellent compatibility with the pewag winner lifting chains that are used extensively on a global scale. pewag winner profilift lifting points comply with Machine Directive 2006/42/EC and/or Machine Safety Regulation 2010, EN 1677-1 as well as with technical specifications. Sophisticated design makes this innovative range complete. The pewag winner profilift lifting points are produced in our ISO 9001 and 14001 certified plants and guarantee a 4- respectively 5-fold safety and a maximum dynamic load of min. 20.000 load cycles, tested at 1.5 times the working load limit.

Working load limits will vary according to the type of application, number of legs and angle of inclination and are listed in tables, which form an integral part of the detailed user manual that each lifting point comes with. Our website www.pewag.com also contains detailed information on working load limits, dimensions etc. as well as downloadable 3D models for design engineers.

pewag lifting points: Calculation of the thread length	51

pewag PLAW alpha

pewag winner profilift alpha. Simply the best.

This lifting point is 360° rotatable. The load ring is rotatable across a wide range and can be positioned at any required angle due to its replaceable and patented spring. The hexagonal special screw is also replaceable and secured against loss. The PLAW pewag winner profilift alpha screw is made from 10.9 grade material, 100% crack-tested, covered with a chromate VI-free protection agent against corrosion and marked with the working load limit and thread size.

The pewag winner profilift alpha screw is able to withstand a 4-fold safety factor against breakage in all directions and every single lifting point is marked with an individual serial number. pewag winner profilift alpha is available with metric or UNC-thread. The versions with metric thread are also available with customised thread lengths. All working load limits, categorised by type of application, the number of legs and angle of inclination, are contained in a table that forms an integral part of the operating manual included with each lifting point.

Optionally also available with peTAG (NFC chip) or PIP (colour marking).

PLAW 0,3 t - 1,5 t and PLAW 4 t / 13

PLAW 2,5 t - 20 t

PLAW 2,5 t - 20 t

Permitted usage

For working load limits in the permitted directions of pull, please refer to the working load limit table.

Non-permitted usage

During assembly, ensure that improper loading does not arise due to any of the following factors:

- Direction of pull is obstructed
- Direction of pull is not within the indicated area
- Loading ring rests against edges or surfaces

The loading ring must be placed in the direction of pull before loading – do not turn under load! For additional details and information, please refer to the full operating manual.

Permissible load directions

Non-permissible load directions

Improper loading as loading ring rests against edges or surfaces

Safety factor 4:1

pewag PLBW beta

pewag winner profilift beta. Five-fold safety.

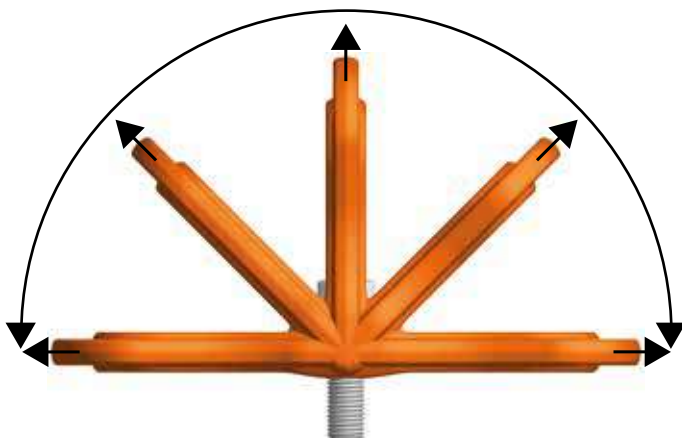

This is another lifting point that is 360° rotatable. The load ring is movable to an angle of 180° and can be positioned at any required angle due to its replaceable and patented spring. In the permitted applications, this lifting point offers five-fold safety.

In accordance with the pewag standard, each lifting point comes with its own individual serial number. The lifting points are marked with the admissible working load limit for the most unfavourable application mode, allowing for an increased working load limit in case of vertical loads. The hexagonal special screw made from grade 10.9 material is also interchangeable and secured against loss. The screw is 100% crack-tested as well as covered with a chromate VI-free protection against corrosion and marked with the working load limit and thread size. It can be tightened with a hexagon wrench or spanner wrench.

pewag winner profilift beta is available with a metric as well as a UNC thread and with customised thread lengths.

All working load limits, categorised by lashing type, number of legs and angle of inclination are contained in a table that forms an integral part of the operating manual included with each lifting point.

Optionally also available with peTAG (NFC chip) or PIP (colour marking).

Permitted load directions

Permitted load directions

Permitted usage

Please refer to the working load limit tables for working load limits in the permitted directions of pull.

Non-permitted usage

During assembly, ensure that improper loading cannot arise due to any of the following factors:

- Direction of pull is obstructed
- Direction of pull is not within the indicated area
- Loading ring rests against edges or loads.

The load ring must be placed in the direction of pull before loading – do not turn under load! For additional details and information, please refer to the full operating manual.

Non-permitted load directions

Improper loading as loading ring rests against edges or surfaces

pewag PLGW gamma

pewag winner profilift gamma eyebolt. Close to perfection.

The PLGW gamma lifting point was developed and manufactured according to the latest standards. Simply tighten by hand, then align in the load direction - a system that is ideally suited for frequent assembly/disassembly. This patented system has been a great success from the word go and offers unsurpassed ease-of-use.

The eyebolt is 360° rotatable, comes with an interchangeable special screw that is 100% crack-tested as well as chrome VI-free finish-protection against corrosion and is marked with the working load limit and the thread size. The surface of the load is protected by an integrated sleeve. The batch number displayed on all load-bearing parts such as the eye and screws as well as the serial number make identification, traceability and performance of mandatory, regular inspections easier than ever.

PLGW supreme: tool-free assembly and disassembly

Latch in position 1: The latch is not in direct contact with the screw (fig. PLGW supreme rotatable)

- The latch is held in place with a patented spring.
- The eyebolt is rotatable.

Latch in position 2: The latch is in direct contact with the screw (fig. PLGW supreme assembly/disassembly)

- The latch is held in place with a patented spring.
- Eyebolt is not rotatable i.e. the fastening torque is transmitted to the screw and thus the eyebolt can be (re)assembled.

PLGW basic:

A simplified alternative is the pewag PLGW pewag winner profilift gamma basic. Offering the same benefits as the pewag PLGW supreme in terms of measurement, working load limit and application, the pewag PLGW basic differs solely when it comes to assembly: Mounting and removing requires the use of a hexagon Allen wrench. A special Allen key for the sizes M8 - M20 is available upon request.

Optionally also available with peTAG (NFC chip) or PIP (colour marking). The pewag winner profilift gamma is also available with a metric or UNC thread.

PLGW supreme –tool-free handling

PLGW supreme rotatable

PLGW supreme assembly/disassembly

PLGW basic - assembly with tools

Permitted usage

For working load limits in the permitted directions of pull, please refer to the working load limit table. Adjust the lifting point in the permitted load direction before loading.

- Loadable with a 4-fold safety factor against breakage in all directions

Non-permitted usage

During assembly, ensure that improper loading does not arise due to any of the following factors:

- Direction of pull is obstructed
- Direction of pull is not within the indicated area
- Loading ring rests against edges or loads
- Assembly with additional tools (e.g. extension) is not permitted

For additional details and information, please refer to the full operating manual..

Special Allen key - available as a spare part (see page 73)

Permitted load directions

Non-permitted load directions

No additional tools permitted

pewag PLGW-SN gamma

pewag winner profilift gamma supreme ring nut Globally unique.

This ring nut works on the principle of tool-free assembly, making it unique worldwide. It is the logical continuation of the successful pewag PLGW supreme eyebolt and is used on loads that come with a threaded bolt instead of a thread.

Alternatively, the PLGW-SN supreme lifting point may be attached in a through-hole using a standard screw, which has the additional advantage of being able to use the same lifting point with different material thicknesses. This method requires just crack-tested screws (strength category 10.9) of different lengths.

For additional details and information, please refer to the full operating manual.

Other benefits of the PLGW-SN pewag winner profilift gamma supreme lifting point:

- No tools are required for assembly or disassembly
- Saves time especially with frequent assembly/disassembly
- The lifting point is rotatable (may be set in the load direction) and loadable in all directions.

Optionally also available with peTAG (NFC chip) or PIP (colour marking).

Different material thicknesses

Existing threaded bolts

pewag PLGW SN
Eye nut 3D

Permitted usage

For working load limits in the permitted directions of pull, please refer to the working load limit table. Adjust the lifting point in the permitted load direction before loading.

- Loadable with a 4-fold safety under break in all directions

Non-permitted usage

During assembly, ensure that improper loading does not arise due to any of the following factors:

- Direction of pull is obstructed
- Direction of pull is not within the indicated area
- Loading ring rests against edges or loads

Each lifting point comes with an individual serial number.

For the corresponding values, see tables with technical data

Permissible load directions

Safety factor 4:1

PLGW in comparison: Points in its favour.

- Significantly higher working load limit with the same thread size
- Rotatable by 360°, thus adjustable in the load direction
- Four-fold safety factor against breakage in all directions
- 100 % crack-tested screw

PLGW eye bolts and/or PLGW-SN eye nut			Eye bolt DIN 580 and/or eye nut DIN 582				
							
	Product	PLGW (SN)	DIN 580 / DIN 582		PLGW (SN)	DIN 580 / DIN 582	
	Thread size	M12	M12	1*) 2*)	M36	M36	1*) 2*)
	Nominal working load limit	0,7 t	0,34 t		7 t	4,6 t	
	WLL	2 t	0,34 t	M30	15 t	4,6 t	M64
	Breaking load limit	8 t	2,04 t		60 t	27,6 t	
	WLL (< 45°)	0,7 t	0,24 t	M20	7 t	3,3 t	M56
	Breaking load limit (< 45°)	2,8 t	1,44 t		28 t	19,8 t	
	WLL (< 45° lateral)	0,7 t	0,17 t	M24	7 t	2,3 t	M64
	Breaking load limit (< 45° lateral)	2,8 t	1,02 t		28 t	13,8 t	

1*) Refers to the size DIN 580 required to carry the same load as the pewag profilit gamma (in the appropriate direction of loading).

Mode of application: Single-leg, straight pull, load = 2 t, required thread size pewag PLGW: M12, required thread size eye bolt DIN 580: M30

Mode of application: Multi-leg sling

2*) The working load limit of DIN 580 applies only if the screws are screwed in completely and rest on the load with the entire contact surface.

Those can always be aligned in the tensile direction. Since it is very likely that at least one screw is loaded in the wrong direction, pewag recommends the adjustable eye bolts PLGW, which may always be aligned with the direction of pull.

Size comparison PLGW M12 – DIN 580-M30

Product and technology training, e-learning, blended learning

The individual courses impart comprehensive knowledge on pewag products and technologies.

These courses provide added value for companies and participants, since they can be used or acknowledged within the framework of training prescribed by law.

pewag PLDW delta

pewag winner profilift delta. Rotatable even under load.

This lifting point comes with a ball bearing and is rotatable by 360° even under load. The high-strength lifting eye is movable by 180°. The special screw is 100% crack-tested, protected against corrosion and marked with the working load limit and thread size. In addition, each lifting point is marked with its own individual serial number. The lifting eye comes with a ring and is wide enough to accommodate even larger hooks.

All working load limits, categorised by lashing type, number of legs and angle of inclination are contained in a table that forms an integral part of the operating manual included with each lifting point. The pewag winner profilift delta lifting points are marked with the admissible working load limit for the most unfavourable application mode, with four-fold safety against break in all directions. In addition, working load limits are higher in case of vertical loading. pewag winner profilift delta is available with a metric or UNC thread, up to a thread size of M100 or a working load limit of 60,000kg.

Optionally also available with peTAG (NFC chip) or PIP (colour marking).

Permitted usage

For working load limits in the permitted directions of pull, please refer to the working load limit table.

Non-permitted usage

During assembly, ensure that improper loading does not arise due to any of the following factors:

- Direction of pull is obstructed
- Direction of pull is not within the indicated area
- Loading ring rests against edges or loads

The lifting points are ball-bearing mounted. However, to prevent the ring from jamming, it is recommended to align it in the permitted and required direction of pull prior to loading (fig. Permitted direction of loading). This is particularly relevant when lifting loads with multi-leg chain slings. If the ring is not aligned (non-permitted loading acc. to fig. 2), the ring holder could suddenly become loose, causing a significant risk to loads and operators.

The full operating manual contains further details and information on safe usage.

pewag PLZW zeta

pewag winner profilift lifting point PLZW zeta. Disassembled in no time.

Thanks to its innovative design, the pewag winner profilift lifting point PLZW zeta may be assembled and disassembled without the use of tools (applies up to thread size M24). The PLZW zeta therefore makes it possible to directly attach closed lifting equipment such as eye sling hooks or rope loops, without having to use additional shackles.

The latest addition to the pewag lifting point portfolio comes with a five-fold safety factor against breakage, is rotatable by 360° and may be loaded in all directions. The individual serial number and the batch number make it possible to clearly identify the lifting point at all times. The PLZW zeta protects the surface of the load from damage thanks to an integrated sleeve. The screw is 100% crack-tested, comes with a chromate VI-free protection against corrosion and is marked with the working load limit, thread size and torque. The PLZW zeta is mounted in the desired position using a tool.

Optionally also available with peTAG (NFC chip) or PIP (colour marking).

pewag winner profilift – lifting point PLZW zeta

pewag AOR lashing point

4:1

AOR lashing point.

When it comes to reliability, this lashing point won't be beaten. It is perfect for mounting machine parts or vehicle bodies as well as for the hanging of lifting and lashing gear.

Permitted usage

Please refer to the working load limit as stated in the inspection certificate and/or the working load limit table to ensure maximum safety for permitted applications.

Non-permitted usage

During assembly, ensure that improper loading does not arise due to any of the following factors:

- Direction of pull is obstructed
- Direction of pull is not within the indicated area
- Loading ring rests against edges or loads

pewag RGS eyebolt

4:1

toolfree

metric

RGS eyebolt.

This high-strength RGS eyebolt is the ideal for lifting machine parts. Eyebolts may only be tightened manually and are not suitable for diagonal pull. However, they cannot be beaten when it comes to quality.

Permitted usage

For working load limits in the permitted directions of pull (fig. Permitted usage), please refer to the working load limit table on the following pages.

Non-permitted usage

During assembly, ensure that improper loading cannot arise due to any of the following factors:

- Direction of pull is obstructed
- Direction of pull is not within the indicated area (fig. Non-permitted usage)

Please note that the RGS eyebolt may only be placed under load in the direction of pull! For all other lashing types, use the rotatable PLGW eyebolt or the rotatable lifting points PLAW, PLBW or PLDW.

Permitted usage

Non-permitted usage

Additional sizes available upon request!

pewag[®] PLGWI gamma inox

pewag winner profilift lifting point PLGWI gamma inox. Rust-resistant ease of use.

Naturally, the PLGW lifting point is also available in a rust-resistant version – as the PLGWI eye bolt, offering all the tried-and-tested pewag advantages: Versatility when it comes to areas of application, accurately fitted measurements, optimised working load limits and unsurpassed ease-of-use. Please note that a hexagon Allen wrench is required as a tool for mounting and removal.

And the PLGWI offers even more than that:

The eyebolt is 360° rotatable, comes with an interchangeable special screw that is 100% crack-tested and is marked with the working load limit and the thread size!

An integrated sleeve protects the surface of the load. The batch number displayed on all load-bearing parts such as the eye and screws as well as the serial number make identification, traceability and performance of mandatory, regular inspections easier than ever.

Additional benefits of the PLGW inox lifting point:

- Extendable areas of application thanks to Duplex steel with heightened rust-resistance
- The PRE/N value that determines the alloy composition and thus also the level of corrosion-resistance, lies at approx. 34.

Optionally also available with peTAG (NFC chip) or PIP (colour marking).

PLGWI gamma inox M12, M16 - available as a "basic" version (tool for assembly required)

PLGWI gamma inox M20 – available in „basic" version (tool for assembly required) and „supreme" version (no tool required for assembly)

Permitted usage

For working load limits in the permitted directions of pull, please refer to the working load limit table.

- Adjust the lifting point in the permitted load direction before loading.
- Loadable with a 4-fold safety under break in all directions.

Non-permitted usage

During assembly, ensure that improper loading does not arise due to any of the following factors:

- Direction of pull is obstructed
- Direction of pull is not within the indicated area
- Loading ring rests against edges or loads.

For additional details and information, please refer to the full operating manual.

Each lifting point comes with an individual serial number.

For detailed information such as lashing type, number of legs, angle of inclination etc., please refer to the tables on the following two pages.

Marking on the screw + exploded view

Straight pull 0°	Lateral load direction „permitted“ (ring is aligned) 90°	Lateral load direction not permitted (ring is not aligned)
Higher working load limits for loading along the screw axis (column "0°" in the working load limit table)	Higher working load limits for loading vertically to the screw axis (column "90°" in the working load limit table)	Application not permitted due to unstable conditions. The ring could turn suddenly while under load - high risk for load and/or persons!

pewag profilift lifting points

As individual as your needs.

We supply your lifting point in a customer-specific length (CL) and maximum thread length (MAXL).

The set includes washer and screw nut.

The provided screw nuts are:

- 100 % crack-tested
- Strength category 10
- Manufactured according to DIN 980 V

Calculation of the desired thread length (L):

$$L = H + S + K + X$$

H = Material height

S = Thickness of the washer

K = Height of the nut (Depending on the thread size of the screw)

X = Excess length of the screw (two-fold pitch)

L max. = n max.

Weldable hooks and lifting points

Product overview

Content

AWHW pewag winner weld-on hook	54
PLEW pewag winner profilift eta	56-57
PLE/N pewag profilift eta	58-59

AWHW pewag winner weld-on hook. Welding mission accomplished.

This high-strength hook is particularly well suited for welding onto excavator bucket, spreader beams etc. Its outstanding features include a die-forged, tempered safety catch, making it extra-robust. As the safety catch locks into the tip of the hook, it provides excellent protection against lateral shifting.

The product is manufactured according to EN 1677-1 with a higher working load limit and comes with full operating and welding instructions that must be complied with at all times. The weld-on hook also has a CE marking. Replacing the SFGW-A safety catch set is easy and quick, without the need for special tools.

Optionally also available with peTAG (NFC chip) or PIP (colour marking).

Safety factor 4:1

pewag – progressive, innovative and reliable

State-of-the-art technology for applications that carry some weight.

Our experience goes back centuries and makes pewag a company built on three principles: progression, innovation and reliability - in short, the factors that are reflected in every single one of our products.

pewag lifting points are products that stand out for their excellent compatibility with the globally successful pewag lifting chain programme and that make it even more versatile and flexible. Guaranteed ease-of-use when it comes to assembly and application is part of the pewag standard.

The weld-on lifting point PLEW complies with Machine Directive 2006/42/EC and is certified according to EN 1677-1 and BGR 500. Load capacities are clearly marked on the welding pad.

All welding operations comply with the provisions of DIN EN ISO 14341 and must be performed by welders with a valid qualification according to EN ISO 9606-1. The lifting points are delivered in individual packaging complete with user information and welding instructions.

Working load limits will vary according to the type of application, number of legs and angle of inclination and are listed in tables, which form an integral part of the detailed user manual corresponding to the Machine Safety Regulation 2010 and the Machine Directive. Each lifting point comes with a full operating manual.

PLEW marking

Operating manual

DGUV test certification

pewag PLEW eta

pewag winner profilift eta. Not one to break a promise.

The high-strength pewag winner profilift eta lifting points for welding onto machine components or vehicle bodies are ideal for the hanging of lifting and lashing parts. Thanks to the integrated spring, the ring is kept in any position that is required.

The PLEW has a higher nominal working load limit than the pewag PLE/N and is also suitable for straight-pull applications (preferred direction of loading) with higher working load limits (see operating manual). Grooves on the welding pad at 45° and 60° make it easier to recognise the permitted angle of inclination.

Each lifting point comes with an individual serial number. Also available with peTAG upon request.

All welding operations comply with the provisions of DIN EN ISO 14341 and must be performed by welders with a valid qualification according to EN ISO 9606-1.

The lifting points are delivered in individual packaging complete with user information and welding instructions.

Permitted usage

Working load limit as stated in the test certificate and/or the working load limit table, in the specified directions of pull.

Non-permitted usage

When choosing your configuration, check that there is no risk of improper loading due to any of the following factors:

- Direction of pull is obstructed
- Direction of pull is not within the indicated area
- Loading ring rests against edges or surfaces

Optionally also available with peTAG (NFC chip) or PIP (colour marking).

--	---	--

pewag PLE/N eta

PLE/N pewag profilift eta. Tried-and-tested for pull in every direction.

For welding onto machine components or vehicle bodies, special products are required that are ideal for attaching lifting and lashing devices. The PLE pewag profilift eta (grade 8) is such a product that has made a name for itself when it comes to high-strength eyebolts. An integrated spring keeps the ring in any position that is required. The product may be loaded in all directions.

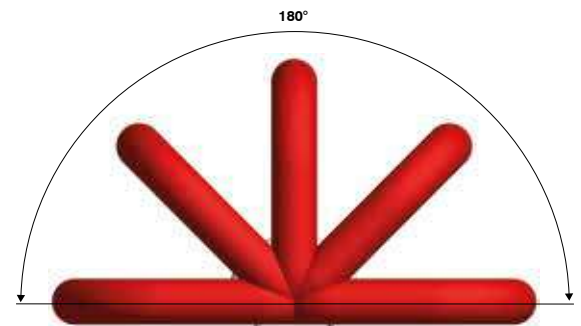

Permitted usage

For working load limits in the permitted directions of pull (fig. Permitted usage), please refer to the working load limit table on the following pages.

Non-permitted usage

During assembly, ensure that improper loading does not arise due to any of the following factors:

- Direction of pull is obstructed
- Direction of pull is not within the indicated area
- Loading ring rests against edges or loads

Anchorage devices for personal protection equipment

Product overview

Content

PLGW-PSA anchorage point for personal fall protection equipment	62-63
PLGWI-PSA anchorage point for personal fall protection equipment	64-65

pewag PLGW-PSA anchorage point

pewag winner prosecure gamma PSA anchorage point for personal fall protection equipment.

The pewag PLGW-PSA anchorage point is part of the anchorage system to which personal fall protection equipment may be attached. It was developed and tested in accordance with the stringent safety requirements for personal protection equipment according to EU Directive 89/686/EEC and already complies with the new EN795:2012 and CEN/TS 16415 standards. For all other details, please refer to the operating manual.

The PLGW-PSA is available in a “Basic” and “Supreme” version: The PLGW-PSA Basic is intended for permanent attachment to the anchorage system (e.g. tripod) and is mounted using a commercial Allen key. The PLGW-PSA Supreme is based on a patented system that allows for tool-free assembly and disassembly. The anchorage point is therefore easy to remove after usage. For detailed information on functionalities, please refer to the operating manual.

Thanks to the varnish in RAL 1003, both versions are also permitted for usage on stationary antennae systems (radio masts). The pewag PLGW-PSA anchorage point is available in size M12 (for 1 person), M16 and M20 (for max. 2 persons). All sizes are also available with a customised thread length.

Each anchorage point is marked with the thread size and the permissible number of persons as well as additional information. The individual serial number enables complete documentation of the required test procedures.

Optionally also available with peTAG (NFC chip) or PIP (colour marking).

pewag PLGWI-PSA anchorage point

pewag winner prosecure gamma inox PSA

The pewag PLGWI-PSA anchorage point is part of the anchorage system to which personal fall protection equipment may be attached. It was developed and tested in accordance with the stringent safety requirements for personal protection equipment according to EU Directive 89/686/EEC and already complies with the new EN795:2012 and CEN/TS 16415 standards. For all other details, please refer to the operating manual.

Unlike the PLGW-PSA, the PLGWI-PSA is made from stainless material (INOX).

In addition, the screws are available in the desired and/or maximum lengths. The PLGWI-PSA may be mounted using a special pewag PLGW key or a standard Allen key.

Optionally also available with peTAG (NFC chip) or PIP (colour marking).

pewag profilift lifting points

As individual as your needs.

Versatile, innovative, customer-specific.

We have the ideal solution for all areas of application.

Our portfolio includes screw-in and weldable lifting points, including models for manual and tool-free assembly with a safety factor of 4:1 or 5:1. All our lifting points come with a unique serial number for clear identification.

You decide which lifting point you need.

We are happy to advise you and help you find the right solution for your challenge.

The individual pewag solution for your challenge.

Based on your requirements, pewag develops safe and user-friendly, customised solutions.

- Whether there is a thread that needs adjusting (pipe thread, internal thread, locking pin etc.),
- solutions need to be customised (colour, reduced contact surface etc.)
- or welded adaptations are required (welded hook, attachment to mounting plate etc.)

we are looking forward to supporting you all the way.
Just get in touch!

pewag PLMS screw nut

This set is often used for pewag winner lifting points with customised lengths.

For sizes M8 to M48, these accessories are available as a set: The nut is crack-tested and manufactured according to DIN 980V in strength category 10. A washer completes the set.

From size M56, the nut is 1.5 times as long and is manufactured according to DIN 6331.

pewag PLGS screw for PLGW

This screw is one of the spare parts for the PLGW pewag profilift gamma lifting point with a metric thread.

PLGS Screw for PLGW	Code	Thread [mm]	VPE [Unit]
	PLGS 0,3 t	M8	10
	PLGS 0,5 t	M10	10
	PLGS 0,7 t	M12	10
	PLGS 1,5 t	M16	10
	PLGS 2,3 t	M20	10
	PLGS 3,2 t	M24	10
	PLGS 4,9 t	M30	4
	PLGS 7 t	M36	1
	PLGS 9 t	M42	1
	PLGS 12 t	M48	1

pewag PLGES spare latches set

The spare latches set for the PLGW pewag profilift gamma supreme is available now.

PLGES Spare latches	Code	Accessory part for	VPE [pair]
	PLGES 0,5 t	PLGW 0,3 t; PLGW 0,5 t; PLGW U 3/8	1
	PLGES 0,7 t	PLGW 0,7 t; PLGW U 1/2	1
	PLGES 1,5 t	PLGW 1,5 t; PLGW U 5/8	1
	PLGES 2,3 t	PLGW 2,3 t; PLGW U 3/4	1
	PLGES 3,2 t	PLGW 3,2 t; PLGW U 1	1
	PLGES 4 t	PLGW 4 t; PLGW 4,9 t; PLGW U 1 1/4	1
	PLGES 7 t	PLGW 7 t; PLGW U 1 1/2	1
	PLGES 9 t	PLGW 9 t; PLGW U 1 3/4	1
	PLGES 12 t	PLGW 12 t	1

pewag PLAS screw for PLAW

pewag spare parts are guaranteed to pass any quality test - and the PLAS screw for the PLAW pewag profilift alpha with metric thread is no exception. Suitable for the PLAW type with sleeve.

PLAS screw for PLAW	Code	Thread [mm]	VPE [Unit]
	PLAS 0,3 t	M8	10
	PLAS 0,63 t	M10	10
	PLAS 1 t	M12	10
	PLAS 1,5 t	M16	10
	PLAS 2,5 t	M20	10
	PLAS 4 t /13 ¹⁾	M24	10
	PLAS 6 t	M30	4
	PLAS 8 t	M36	1
	PLAS 10 t	M42	1
	PLAS 15 t	M42	1
	PLAS 20 t	M48	1

¹⁾ Only available for new model version

pewag PLBS screw for PLBW

This screw is one of the parts for the PLBW pewag profilift beta lifting point with a metric thread.

PLBS Screw for PLBW	Code	Thread [mm]	VPE [Unit]
	PLBS 0,3 t	M8	10
	PLBS 0,6 t	M10	10
	PLBS 1 t	M12	10
	PLBS 1,3 t	M14	10
	PLBS 1,6 t	M16	10
	PLBS 2 t	M18	10
	PLBS 2,5 t	M20	10
	PLBS 3 t	M22	10
	PLBS 4 t	M24	10
	PLBS 5 t	M27	4
	PLBS 6,3 t	M30	4
	PLBS 8 t	M33	2
	PLBS 10 t	M36	1
	PLBS 12,5 t	M42	1
	PLBS 15 t	M48	1

pewag SFGW-A safety catch sets

These SFGW-A safety catch sets forged-with and electro-galvanised safety catch and a spring made from rust-proof spring steel are all about safety and security.

The safety catch sets are in a league of their own - even the tiniest pewag parts offer outstanding quality!

SFGW-A safety catch sets Code	Code	For accessory part
	SFGW-A 1	AWHW 1,3
	SFGW-A 3	AWHW 3,8
	SFGW-A 6	AWHW 6,3, AWHW 10

pewag PLGIS Allen key set

Assembly of the PLGW requires tools. Special Allen keys make assembly of the PLGW basic M8 up to and including M20 particularly straightforward. The keys are marked with the size and the torque and are available as a complete set.

The PLGW supreme is designed for tool-free assembly.

pewag ALP thread adapter

Loads often come with tapped holes for DIN-580 eyebolts.

The thread adapter can be mounted using a commercial open-jawed spanner; the pewag lifting point is then mounted according to the instruction manual.

By using the pewag thread adapter, the high-strength pewag lifting points (PLAW, PLBW, PLGW, PLDW) can replace the standard eyebolts.

The thread adapter can be mounted using a commercial open-jawed spanner; the pewag lifting point is then mounted according to the instruction manual. The permitted working load limit corresponds to the pewag lifting point fitted in the internal thread.

pewag peTAG chip

The pewag peTAG solution enables the intelligent, location-independent management of product-specific information.

Via an NFC chip on the product, relevant product information (working load limits, safety instructions, operating manual) is literally at your fingertips. All you need is a NFC-compatible smartphone.

Your benefits at a glance:

- Clear object identification.
- Efficient documentation of test processes.
- Safe archiving of data.
- Mobile data retrieval without expensive readers.
- Automated compilation and dispatch of inspection reports.
- Efficient interaction with service partners.
- Intelligent, high-performance online platform.

Note: As every lifting point comes with just one pilot hole, you can use them either for the peTAG (NFC chip) or the PIP (colour marking).

Example: PLGW with peTAG (NF chip)

peTAG solution:
Smart solution
– intelligent core

pewag PIP colour marking

The PIP is a variable marking made from soft plastic that fits into the existing 4mm peTAG hole on all screw-in pewag winner lifting points.

The plug is a visual indicator for regular inspections – if no peTAG was fitted into the hole, the PIP may be fitted instead, serving as a test marking.

It is characteristic of the PIP that it is available in a different colour each year. The user (and tester) is thus able to determine the date of the latest inspection based on the colour of the PIP.

Note: As every lifting point comes with just one pilot hole, you can use them either for the peTAG (NFC chip) or the PIP (colour marking).

User information

for lifting points

User information

User information

78-79

User information

Information and safety guidelines on usage, storage, inspection and servicing of pewag winner lifting points.

General information

pewag winner profilift lifting points are quality products that are suitable for a wide range of general lifting purposes using different designs, types of load and application modes. For detailed information on design types and the classification of working load limits, please refer to the tables in this catalogue

Responsibility is key

If the pewag winner profilift lifting points are used correctly and by competent persons, they have a long lifespan and provide the highest possible safety standards. Material and personal damage can be avoided by reading this user information carefully and handling all lifting processes in a responsible, provident manner.

Please note that all operating manuals that come with the product must be complied with at all times!

Changes to the condition as delivered

Only the original parts provided in the delivery may be used to complete the installation.

Modifying the original condition by grinding, welding (with the exception of the weldable lifting points), drilling, stamping etc. is not permitted and means exposing yourself and others to unnecessary danger. In such a case, safety can no longer be guaranteed and usage becomes dangerous. pewag does not accept any liability in such cases. Do not apply any surface coatings, i.e. do not subject them to hot galvanizing or electrogalvanizing. Cleaning processes that rely on dipping or removing a coating with chemicals are potentially dangerous processes that may give rise to hazards.

We recommend consulting pewag prior to performing these processes. The welding seam of the weldable lifting points are best protected against corrosion by applying a varnish.

Correct usage of the lifting points

If used correctly, pewag winner profilift lifting points are safe and strong. Please note that they may only be used by authorised personnel who have received sufficient training. Correct usage is subject to the following principles: The position on the load must be chosen in such a way that the transmitted forces of the base material can be absorbed without any deformations. Prior to loading, the load bracket needs to be adjusted in the direction of pull. Non-permissible

strains such as twisting or rotating the load must be avoided. Please ensure that the lifting gear can be mounted and demounted without any risk of injury! Damages to the load, lifting gear or lifting can be avoided by proper positioning. In cases where a single lifting point is used, this has to be mounted flat over the centre of gravity of the load. When using two lifting points (2-leg chain sling), these have to be mounted symmetrically on both sides of the centre of gravity of the load. When using 3 or 4 lifting points (3 or 4-leg chain slings), these have to be mounted evenly on one level surrounding the centre of gravity of the load. Care must be taken to ensure that the load is evenly spread among the individual chain legs.

In case of asymmetrical load distribution, the working load limit must be reduced in accordance with the working load limit table supplied. This may result in you having to use a lifting point of the next highest working load limit. Usage in acids and caustic solutions or exposure to their vapours is not permitted. Please be aware of this requirement at all times as certain production processes release acids and/or vapours! The working load limit will also be reduced if the lifting points are exposed to higher temperatures. Please comply with the supplied operating instructions at all times. For further information, please contact the pewag technical service team.

Screw-in lifting points

We recommend the following minimum screw penetration:

- 1 x M for steel (M = thread size, for instance M16)
- 1.25 x M for cast steel
- 2 x M for aluminium

To ensure safe usage, the thread size and thread length for materials of lower strength, like light metals, non-ferrous metals or cast iron, must be chosen in such a way that the occurring loads may be absorbed by the lifting point.

Impact loading or vibration may cause the screw to become loose. To avoid this, apply a liquid threadlock such as Loctite. If using additional tools of this sort, please follow the manufacturer's instructions. pewag accepts no liability if components are used that are not part of the pewag range (e.g. screws).

Please check the following points prior to each usage:

- Screws are sufficiently tightened and the fastening torque corresponds to that specified in the operating manual
- The lifting point is complete, i.e. no components are missing
- The stamp of the lifting point is clearly legible
- The lifting point shows no signs of damage such as notches, cracks, deformations, wear, strong corrosion, surface cracks on load-bearing parts, noticeable signs of excessive heat exposure (such as burnt varnish, discolouration of the base material)
- Rotatable lifting points may be rotated freely and smoothly.

In addition, check before each assembly:

- Screws and threads are not damaged
- Correct screw size, screw grade and screw depth

The supplied operating manual must be complied with at all times!

If in doubt or in case of visible damage, the lifting points must be decommissioned and inspected by a competent person. This also applies to usage after unusual events, for instance uncontrolled exposure to heat.

Weldable lifting points

For welding, the following instructions apply:

- Welding processes may only be performed by a qualified welder according to EN ISO 9606-1.
- The material of the welded-on parts is specified on the operating manual that is included in the scope of delivery.
- The surface of the welding area must be thoroughly cleaned before welding. Rust and scale, paint, oil or similar must be removed.
- Contact between the coated bracket and the welded material must be avoided

Please check the following points prior to each usage:

- The stamp of the lifting point is clearly legible
- The lifting point shows no signs of damage such as notches, cracks, deformations, wear, strong corrosion, surface cracks on load-bearing parts, noticeable signs of excessive heat exposure on the coated bracket (such as burnt varnish, discolouration of the base material)
- No surface cracks or damage along the welding seam

The supplied operating manual must be complied with at all times!

If in doubt or in case of visible damage, the lifting points must be decommissioned and inspected by a competent person. This also applies to usage after unusual events, for instance uncontrolled exposure to heat.

Correct maintenance

The maintenance of pewag winner profilift lifting points must be performed by competent persons. Improper use or use by unauthorised persons must be avoided at all times.

Prevention is better than cure!!

Prior to using a lifting point, it must be verified whether the lifting point was inspected every 12 months by a competent person and in accordance with applicable national standards. If the chain sling is frequently used at its full working load limit, more frequent inspections are required! All inspections must be documented, in particular with regard to results and servicing activities. These records must be kept throughout the service life of the lifting points.

A sample documentation sheet is available for download at www.pewag.com.

Clean storage

pewag winner profilift lifting points must always be stored in a clean and dry conditions and protected against corrosion, i.e. slightly lubricated.

The thread shafts must be protected from damage using appropriate means.

Important

With the exception of the RGS eyebolt, all pewag winner profilift lifting points may also be used as lashing points. The admissible lashing capacity is double the nominal working load limit, as a 2-fold safety factor applies to the securing of loads. For the PLBW lifting points, a 2.5-fold safety factor applies as lifting operations require a safety factor of 5:1 for lifting operations. We recommend consulting the pewag technical service prior to using the lifting points as lashing points.

Example

PLE/N 8 = 2,000 kg working load limit for lifting operations. As lashing point LC = 4,000 daN admissible lashing capacity

Please refer to our website at www.pewag.com for detailed information on working load limits, measures and 3D models (section Lifting Technology / Lifting Points). Each lifting point comes with a detailed operating manual in two languages.

Detailed original operating manuals for all our pewag quality products are available for download at www.pewag.com. Our manuals are subject to a continuous improvement process to ensure that they are always up to date. For this reason, always refer to the latest version of a manual.
